COMMERCIAL CONSTRUCTION IS AS FAST AND EFFICIENT AS 1-2-3!

Why? Because unassembled Logix KD is fully compatible with assembled Logix Pro™.

1. Install back Logix KD panel and attach internal web connectors.
 2. Install heavy commercial rebar patterns quickly, moving web connectors around as needed.
 3. Attach front Logix KD panels to web connectors.
- Then use assembled Logix Pro everywhere else for maximum efficiency.

LOGIX IS PERFECTLY DESIGNED TO SEAMLESSLY ACCOMMODATE COMMERCIAL REBAR.

Other ICF brands force builders to do it backwards — and waste a tremendous amount of time and money building their complicated rebar patterns inside tight wall cavities obstructed by webs.

- **2x more cutlines than most ICFs**
- **2x the ability to cut on a cutline**
- **2x the chance to preserve the interlock**
- **With efficient running bonds, there's no need to brace with numerous wood boards**

LOGIX GIVES YOU
CUTLINES EVERY 1".

THAT'S TWICE THE
NUMBER OF MOST
OTHER BRANDS.

It's always better to cut on a cutline. That's why every brand has them — but Logix gives you more!

Many other ICF brands have only 2" cutlines — that's only half the number of cutlines you get with Logix ICF.

The cutlines in other brands are so infrequent, in fact, that it's often not worth trying to cut on one at all!

That's also why other brands recommend labor-intensive stack seams braced with wood in EVERY wall section. And what they don't tell you is that every 9' stack bond (which needs to be braced on both sides and then the wood removed after the pour) has a hidden time and materials cost of up to \$70 per, adding \$100s to the cost per floor.

WALL OPENINGS THE COMPLETE SOLUTION

- **Easy, void-free concrete placement under the opening** — foam-only areas for 4" access holes

- **Strong, dependable, insulating foam** — high-density 2 lb. foam
- **Minimal waste** — leftover pieces securely clip together end-to-end, generating minimal waste
